

PSD Series Snare Drum

The Pearl PSD series Snare Drum is positively the most sensitive snare drum available today. Combined with the Lightning S-019 strainer, in cable or gut, you can play as loud or as soft as you wish with fantastic projection and no loss of sensitivity. The PSD series provides the full dynamic range needed . . . and much more.

Designed specifically for Pearl's Marching Snare Drum the "Super Hoop" is a solid piece of 2.3 mm steel providing superior strength. The flange is one-quarter inch higher than standard hoops, so that no matter how far down the head is pulled, rim shots can still be played.

Strainers

Designed for use with either cable or gut, the Lightning S-019 strainer is the state of the art today. The S-019 keeps the snares under constant tension at all times. In the off position the snares are completely lowered away from the head on both sides. Parallel action in a one-sided throw off. Each snare strand is individually adjustable. Two horizontal and two vertical adjustments for fine tuning.

S-019

S-017

The S-017 is a true parallel action throw off, available with cable only. A single length of cable is used to form 12 snares that need no individual adjustment. Features two horizontal and two vertical adjustments for fine tuning.

MARCHING PERCUSSION

Pearl Timp-Toms

Pearl Timp-Toms are available with either standard heads or Thunderheads. Thunderheads are an extended collar design that slopes to a one-inch oversize rim and head to provide booming power, truer pitch and greater projection.

Pearl Marching Percussion products are the result of Pearl engineers, designers, and craftsmen working hand in hand with educators and players to proudly offer the finest equipment available.

Pearl Bass Drums/Drum Shells

Pearl Bass Drums are crafted with 8-ply cross-laminated maple shells. (Sizes from 30 inch to 40 inch, 6-ply cross-laminated maple). Bass Drums from 20 inch to 28 inch diameter available in 14 inch or 16 inch width. Larger sizes 16 inch width only.

Pearl's Bass Drum hoops are solid rock maple making them the strongest bass drum hoops available for today's marching groups. The hoops measure 2 inches wide by 3/8 inch thick.

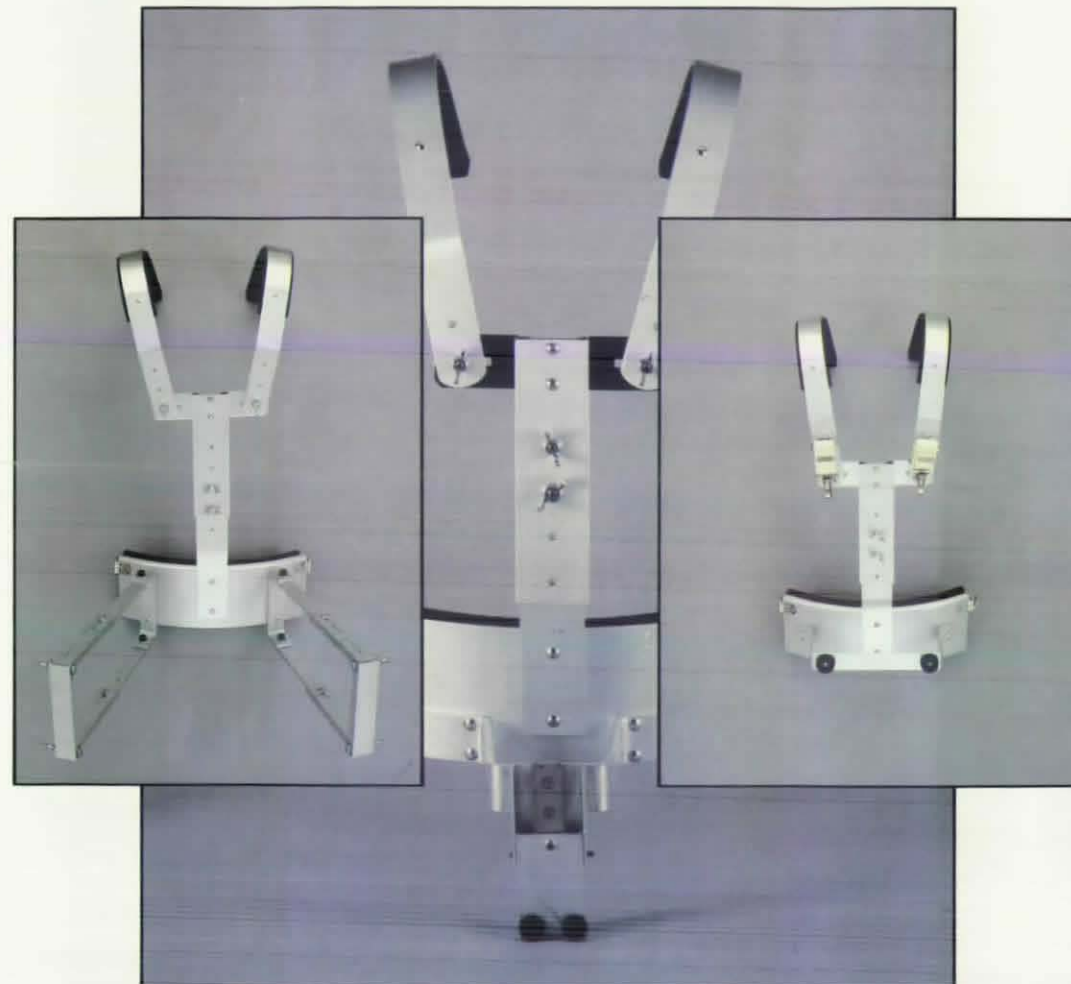

Pearl's 5-ply cross laminated maple and hardwood Snare Drum shell is the strongest shell available. Pearl research and development has provided the proper snare bed and venting of the shell to allow the snare drum to respond no matter how lightly it is struck or how tightly it is tensioned.

The Pearl Timp-Tom shells are 8-ply cross laminated maple, with staggered butts, combining superior strength with light weight.

Pearl's Sonic-Cut[®] is a specially designed cut in the Timp-Tom shell that makes this shell its own reflector, providing greater forward sound projection.

Drum Carriers

Pearl's Lok-on[®] Snare Drum Carrier positions the drum for more comfortable playing. The drum is securely locked to the carrier allowing for quick movement in today's fast moving drill designs. The drum is easily removed by loosening one wing screw. Lightweight and fully adjustable.

Trio and Quad carriers utilize dual clips that slide in or out of clip brackets mounted on the Timp-Tom shells. As an option, all shells may be bolted together. Lightweight and fully adjustable.

Dual rubber bumpers help stabilize the Bass Drum on its lightweight adjustable carrier.
