

The New DR-70 Drum Rack

The new DR-70 Drum Rack offers many of the same features as the popular DR-100 but is lighter in weight and costs less.

The new DR-70 Drum Rack is also expandable allowing endless set-up possibilities. The above DR-70 features the addition of one DR-007 Expansion Option. The DR-007 consists of one rail and one leg.

For the drummer concerned with both professional dependability and price Pearl now offers an excellent alternative, the DR-70. The new light weight DR-70 takes advantage of the same square tube rail and round leg design concept as the DR-100 rack and offers many of the same features. The DR-70 is also fully expandable by adding the DR-007 expansion option. Just like the DR-100, you can add as many as you need for your personalized set-up. The smooth rails of the DR-70 are slightly smaller than the DR-100 and require a different clamp. The new PC-07 clamp has

been designed for use exclusively on the DR-70 to allow simple hinging installation but remain light in weight and easy on the budget. The PC-07 will hold all of Pearl's versatile cymbal and tom holders providing endless configuration possibilities. The DR-70 drum rack, like the DR-100, folds for compact transport or storage and its light weight makes it very easy to handle. The DR-70 will fit all drum sets with bass drums of 24" or smaller. However, due to its weight conscience design the DR-70 will not accept Pearl's CR-100 cymbal rack. For the budget minded drummer in need of a rack system, the new Pearl DR-70 is the obvious answer.

The Pearl Drum and Cymbal Rack System

The Pearl Drum and Cymbal Rack System.

The basic rack set-up. A 5 piece drum set mounted to Pearl's DR-100.

Pearl's approach to rack systems has always differed from the rest of the pack. While others struggled with complicated pipe puzzles, Pearl's lightweight square tube design was becoming the most popular rack available. Today's DR-100 and DR-200 drum racks represent the evolution of Pearl's award winning drum rack design.

The DR-100 is the basic Pearl drum rack featuring three square extruded aluminum rails and four round steel legs. For a 22" and smaller bass drum you need a DR-100. The DR-200 is for 24" bass drums. The entire rack has a tough black anodized finish. Once your Pearl rack has been assembled you never have to take it apart again. Pearl drum racks fold for easy, compact transport or storage. The new DR-022 expansion option now makes it simple to extend the size of your rack. The DR-022 consists of one rail and one leg. Add as many as you need to get the look and function required for your set-up. The DR-022 extends a DR-100 rack and the DR-024 extends the taller DR-200.

Pearl's rack clamps have also gone through some design changes. The new PC-10 clamp hinges open for quick, easy set-up. Now that the rack rails are completely square, the new PC-10 clamp can mount on any side of the rail holding a tom or cymbal holder in any direction. This opens up possibilities never before available and allows you the freedom to design a set-up that will best reflect your style of play.

The DR-100 folds for compact storage and transport saving both space and set-up time.

The basic drum and cymbal rack set-up. A 5 piece drum set mounted to Pearl's DR-100 with hanging cymbals from the CR-100.

Both the Pearl drum rack and cymbal rack allow you to expand by adding as many expansion options as needed to complete your personal set-up requirements. The above set-up uses one drum rack extension and one cymbal rack extension.

The new Pearl CR-100 cymbal rack takes advantage of the same proven design principals as the DR-100 drum rack. It's lightweight square aluminum tube design also utilizes the versatile PC-10 rack clamp to hang cymbals. Twelve PC-10 clamps are provided with the CR-100. The cymbal rack easily mounts to the DR-100 or DR-200 using eight of the provided PC-10's and is held in place by four steel connecting tubes. Expansion options are also available and easily attached to the CR-100. Pearl's new cymbal rack also folds for compact transport or storage. The rails of the CR-100 are square, like the DR-100 drum rack, allowing you to mount a PC-10 in any direction to hold a cymbal. No other rack system for cymbals or drums offers such simplicity, intelligence and innovation. With Pearl's drum and cymbal racks your set-up options are only limited by your imagination.

Pearl's cymbal rack is easily installed using the standard PC-10 clamps included.

Cymbal and Tom Holders

When you decide to add additional drums or cymbals to your rack system Pearl offers a wide array of cymbal and tom holders. Our most popular cymbal holder is the CH-85 which is well suited for medium weight cymbals and offers a standard boom reach with the uni-lock cymbal tilting system. For longer reach applications or heavy weight cymbals the CH-95 or telescoping CH-95T may be more appropriate. The CH-95 features our deep gear locking system at both adjustment points and an oversized boom counterweight.

Our most popular tom holder is the TH-95 which also features the uni-lock system for precise tom positioning. Various adapters are also available from Pearl to provide even more flexibility in designing your rack system.
