

Pearl Marching Percussion 1995 New Products Update

New 13" Free Floating Snare Drum

The FFX103G, 13" Free Floating Snare Drum is the newest addition to Pearl's industry leading marching percussion line. All of the advanced features that have helped our 14" FFX become the most innovative marching drum in the history of competitive drumming can be found incorporated within the new FFX103G. This incredibly lightweight (14.7 lbs.) free floating snare drum features our 100% naturally aged 6 ply maple shell, 10 oversized 6mm case hardened steel tension bolts, our unique aluminum alloy edge ring, die cast hoops with snare guards, our lightning strainer with quick release and 14 individually tunable synthetic gut snares. The FFX103G offers incredibly fast snare response, a higher tunable range and a more focused sound than it's 14" big brother, making it the perfect choice for competitive situations requiring a greater variety of snare sounds or for the smaller player where weight becomes an extremely important factor. The FFX103G is available in four standard colors; #31 Jet Black, #33 Pure White, #38 Stainless Steel and #71 Ferrari Red.

FFX103G

Lightning Snare Strainer

Our Lightning Snare Throw-off Unit is super quiet and can be positioned anywhere between off and on to create a variety of tonal colors. By simply turning a knob the Quick Release Snare Unit is disengaged, making snare head replacements quick and easy with no small nuts, springs and washers to keep up with.

Tunable Synthetic Snares

14 individually tunable synthetic gut snares provide the ultimate in fine tuning. Six acoustically located air vents allow snare side tone to blend with the overall tone of the drum. Over sized snare guards protect the drum while at rest, either on the ground or in the stands.

New 16" Championship Series Marching Bass Drum

Our new 14" X 16" Championship Series Marching Bass Drum further extends the choices available within what many consider the best sounding marching bass drum line in the industry. Our exclusive 100% aged maple shell and extra-wide 2" high gloss black all maple hoops are combined with triple reinforced solid steel claw hooks and our exclusive aerospace quality aluminum casings to give you the sound, dependability and performance you have come to expect from a bass drum carrying the Pearl name. This new smaller size bass drum offers a higher tuning range while providing superior projection and the added bonus of being lighter in weight. If your needs require higher tuning ranges with less drum fatigue, or a lighter weight is needed for smaller players, the new PBD216N 16" Bass Drum is the only choice.

PBD216N

New Free Floating Snare Attachment

We have removed the clip brackets from all of our free floating snare drums and replaced the brackets on all our championship series carriers to the revolutionary new FFSA assembly shown here. The new FFSA fits both the 13" and 14" FFX snare drums by clipping on to two of the drums tension posts, with no direct shell contact. A built in safety stop eliminates any fear of over tightening when attaching to the drum. The FFSA provides super smooth nylon sleeved tilting movement and offers quick no-tool adjustability for playing position. The FFSA easily attaches to all of our championship carriers using aluminum J-rods and provides a much more precise, compact feel.

FFSA

The New MSC-2 Marching Carrier

Our New MSC-2 Championship Series Marching Carrier features the new FFSA Clip Bracket shown above and utilizes J-rod attachments with improved adjustability. Exceptionally durable T-5 aircraft quality aluminum construction ensures years of dependability and fully adjustable collar bars with extra padding provide extreme comfort. There is simply no other aircraft quality aluminum marching snare drum carrier that offers the features of the new MSC-2 at anywhere near the price.
