

SensiTone®

Pearl's new SensiTone® Custom Alloy snare drums embody the look, sound, and playability of classic snare drums but at a fraction of the price.

The central projection ring defines the classic lineage of these superb instruments while adding the shell's integrity for superb clarity and definition. Rather than smothering the drum (with "full contact" traditional lugs), our new bridge lugs attach to the shell at only two points for unrestricted resonance, extended harmonics and spectacular sonic purity.

All SensiTone Custom Alloy snare drums are equipped with new SuperHoop II rims. The heavy 2.3mm steel construction and new profile of these remarkable rims assure crack-ing rimshots and rock solid cross-stick effects.

The SensiTone features new SR-014N vertical pull strainers for incredible snare response at all dynamic levels. Smooth, quiet lever engagement make the SensiTone ideal for recording and concert band as well as general purpose drumset use. New 200 strand snare string assures exceptional stretch resistance for stable snare settings. SensiTone Custom Alloy snare drums are available in brass and steel.

Pearl's New Custom Alloy Snare Drums

SensiTone®
