PEARL EXPORT SERIES SPECIFICATIONS FOR 1998

- SHELL** The outstanding shell construction of Export Series drums is a proprietary composite of Mahogany and other selected hard woods, 7.5mm in thickness. This precise blend is formed using pearls patented Heat Compression Shell Molding System which uses an exclusive adhesive formulation and extreme heat and constant cylindrical force to produce a shell that responds as if it is one solid, continuous air chamber. The result is a drum with a characteristic warm tone, great projection and stunning attack. The sound of Export is simply unequalled by other drums in this price range.
- FINISH** Export features an extremely durable, high gloss synthetic covering in your choice of eight colors. Export's tough exterior resists scratches and looks great year after year, gig after gig. All Export Series Bass Drums feature black powder coated steel Bass drum hoops with matching color inlay.
- HARDWARE** For years Pearl Hardware has been considered the most complete, best all-around hardware line on the market. Our Export Series kits include our new double braced 800W Series hardware offering pro quality features and extreme durability. Every kit for 1998, including our standard five piece configuration, includes both a C-800W Cymbal Stand and a B-800W Boom Stand. Our fast, powerful Power Pro 100 chain drive bass drum pedal, our direct pull chain drive H-800W Hi-Hat Stand and our sturdy S-800W Snare Stand complete the outstanding standard hardware included with Export Select.
- MOUNTING SYSTEM** Also new for 1998 is the addition of our pro series TH-98 Uni-Lock Tom Holders as standard on all Export Series mounted toms. Our TH-98 Tom Holders feature endless positioning possibilities and an exclusive internal braking system that securely holds each tom with a simple turn of a key bolt.
- SNARE DRUM** Our new 5.5" x 14" SS-514 Mirror Chrome Plated Steel Snare Drum is based on our extremely popular "Sensitone" snare drum and is also standard equipment with all Export Series Kits. It features a classic, vintage look, and a sound that offers great sensitivity, tonal clarity, outstanding volume, attack and body. Formed into the center of the shell is a ring to enhance projection while protecting the rigidity and integrity of the shell.
- HEADS** Pearl's all new ProTone Drum Heads are standard on all Export Series drums for 1998 and represent a great departure from the normal quality heads found on kits in this price range. ProTone Heads are constructed of professional quality Dupont Mylar® for the tone, response and lasting durability you expect from premium quality drum heads. Our ProTone Bass Drum Head features Perimeter EQ self muffling for a thunderous, deep, outstanding bass drum sound, without pillows or holes, virtually straight out of the box.

EIGHT DURABLE HIGH GLOSS COVERED FINISHES
