

Completely

Smooth,

Totally

Natural Feel.

PosiLink Twin Cam Drive Hi-Hat Stand H-2000

PosiLink Twin Cam Drive System

This completely new and exclusive Hi-Hat drive system utilizes two cams and two double link chains, working together, to provide the smoothest, quietest, most natural feeling Hi-Hat action ever imaginable. No other system can provide the extreme torque, natural response and tight, crisp Hi-Hat sound offered by this exciting innovation in Hi-Hat drive design. We've even replaced the normal felt washer on the lower pull rod return with a spring. This helps to further quieten the pedal when removing your foot, and adds greatly to the pedal response while playing.

Interchangeable Cam

You can easily custom tailor the response curve and action of the Eliminator Hi-Hat by choosing between four different cam options. Our Black Cam provides a smooth, constant, very natural linear action. Our White Cam is also Linear but with a slightly lighter feel. The Blue Cam accelerates with speed and power as it's played and our Red Cam is the most radical and aggressive. This system allows you to play as normal or as aggressive as you like and can also be used to offset the feel of heavier cymbals. Each Eliminator Hi-Hat includes all four cams.

VariSet Footboard Angle Adjustment

Unlike "gear" type adjustment systems common with other Pedals and Hi-Hats, our VariSet system allows you to effortlessly rotate the pull cam to change the angle of the footboard offering a much wider range of angle adjustability. The pedal height can also be adjusted on the pedal cam side, allowing you to also quickly compensate for the difference in footboard heights produced by interchanging the cams.

TractionPlate Footboard

This new concept in footboard design is shared with our Eliminator Bass Drum Pedal and allows you to remove and reconfigure each individual traction grip to suit your exact requirements. The TractionPlate is also reversible allowing you to position the slide or grip of the plate at either the front or rear of the pedal.

PowerShifter

This revolutionary function, first introduced on our now famous PowerShifter Bass Drum Pedal, allows you to move the footboard to one of three preset positions. This changes the angle of the pull chain and thus allows you to adjust the feel and action of the Hi-Hat from a light feel, to one with extreme power and torque.

Swiveling Dual-Legs

Eliminators' new Swiveling Dual-Legs allow perfect positioning with Twin Bass Drum Pedals and other accessory pedals while still maintaining a firm, stable stance. Its offset post design also provides closer positioning with your snare drum while leaving the pedal in the normal playing position.

SuperGrip Clutch

Our all new SuperGrip Clutch design is the strongest, most dependable system available today. It features a completely solid upper and lower tunnel design with a center gripping hinge to hold your upper Hi-Hat Cymbal securely like no other clutch has ever done before. It also features a new die-cast wingnut designed to allow you to easily and securely tighten the cymbal.

Precision Spring Tension Dial

Eliminators' new Precision Spring Tension Dial is engineered with a multitude of exact steps allowing you to precisely and quickly dial in your optimum tension setting. This innovative system offers a far greater tension range and its exact locked-in steps will not slip or move under stress.

New Reversible Rubber/Spiked Tipped Feet

Our newly designed convertible rubber feet feature an attached steel spike that can quickly be rotated into place providing the ultimate in traction when needed.
